

Unilever Presentation

Updated: 12/08/2026

AGENDA – Key Business Questions from the Brief

Primary analysis: 13 weeks ending 2026-08-02

- **Category Growth**
Where is the volume/value opportunity?
- **02 — Pack & Price**
Which propositions can unlock incremental consumption?
- **03 — Where to Win**
Which regions, retailers and variants should be prioritised?
- **04 — Competitive Execution**
Where is Imana winning and why?
- **05 — Commercial Action**
What should we Protect, Improve, Fix and Test?

Bouillon Category - Where should Unilever concentrate resources (Distribution Gaps)

Key Opportunity

12x10g
Recover volume
56,700

24x10g
Protect & Grow
86,300

6x10g
Build entry pack
15,000+
Entry pack opportunity

Total Knorrox volume Opportunity 143,000

Areas To Improve (Distribution Gaps)

12x10g - Recover Volume (Numeric Distribution %)

Flavour	Checkers	U SAVE	Checkers Hyper
Beef Curry	77.4%	17.3%	100.0%
Chicken	100.0%	100.0%	100.0%
Chilli Beef	96.9%	99.0%	100.0%
Beef	100.0%	100.0%	100.0%

24x10g - Recover Volume (Numeric Distribution %)

Flavour	Checkers	U SAVE	Checkers Hyper
Beef Curry	37.6%	69.1%	100.0%
Chicken	73.4%	100.0%	100.0%
Chilli Beef	86.9%	99.6%	100.0%
Beef	68.8%	99.8%	100.0%

6x10g - Recover Volume (Numeric Distribution %)

Flavour	Checkers	U SAVE	Checkers Hyper
Beef Curry	52.9%	2.4%	100.0%
Chicken	47.4%	1.4%	100.0%
Chilli Beef	48.3%	2.2%	100.0%

Biggest gap:

Beef Curry in Checkers. Focus on improving availability

Biggest gap:

Beef Curry in Checkers, U SAVE and Checkers Hyper. Focus on improving availability

Biggest gap:

Low distribution in Checkers, U SAVE and Checkers Hyper

24x10g - Protect and Grow

CHECKERS - Focus Packs 12x10g, 24x10g and 6x10g

City Distribution			
City	24x10g	12x10g	6x10g
Alberton	25%		
Bloemfontein	25%	50.7%	
Bryanston	33%		
Centurion	20%		
Fourways	16.7%		
Sandton	28.6%		
George		50.0%	
Jeffreys Bay		50.0%	
Kimberley		50.0%	
Knysna		50.0%	
Queensburgh		50.0%	
Johannesburg			5.6%
Sea Point			50.0%

U SAVE - Focus Packs 24x10g, 12x10g and 6x10g

City Distribution			
City	24x10g	12x10g	6x10g
Bloemfontein	16.7%	16.7%	16.7%
Burgersdorp	50.0%		
Edenvale	50.0%		
Bushbuckridge	66.7%		
Edenvale	50.0%		
Pretoria		4.0%	4.0%
Rustenburg		9.1%	
Wesselsbron		33.3%	
Louis Trichardt			8.3%
Mokopane			16.7%
Thohoyandou			7.1%

Bouillon Category - Where should Unilever concentrate resources (Promotional Support)

24x10g - Protect and Grow

Knorrox already promotes more than Imana, but grows slower. Focus on improving promotion effectiveness

Knorrox		Imana	
+2.2%	49.4%	+20.3%	36.5%
Vol. growth	Promo Sales	Vol. growth	Promo Sales

Action: Optimise promotion mechanics, depth and execution to drive volume from existing investment

24x10g - Protect and Grow

Knorrox promotes less while declining. Increase targeted promotions to recover volume

Knorrox		Imana	
-3.7%	13.3%	+20.2%	34.9%
Vol. growth	Promo Sales	Vol. growth	Promo Sales

Action: Increase targeted promotional supports in priority retailers and cities to win back volume

WHERE TO FOCUS PROMOTIONS FOR 12X10g

Retailer	Province	Store (Top Priority)	Volume Opportunity	What to do
Shoprite	Gauteng	Soweto, Meadowlands, Daveyton Mall, River Square	11,047	Targeted Promo
SuperSpar	Gauteng	Fourways, Menlyn, Randburg, Woodmead	8,919	Targeted Promo
Shoprite	KZN	Pinetown, Gateway, Brookside, PMP Liberty	6,518	Targeted Promo
Shoprite	Western Cape	Parow, Blue Route, Khayelitsha, Somerset West	5,061	Targeted Promo
Shoprite	North West	Rustenburg, Mahikeng, Potchefstroom, Klerksdorp	5,027	Fix ND/WD → then promo
Shoprite	Limpopo	Polokwane, Tzaneen, Makhado, Lephale	4,621	Targeted Promo
Shoprite	Eastern Cape	Port Elizabeth, Mdantsane, East London, King William's Town	4,509	Targeted Promo

Use targeted promotion to recover this identified volume opportunity, prioritising stores where distribution is already sufficient.

Bouillon Category - Where to win.

The category has limited growth, but clear opportunities exist to unlock incremental volume through the core 24x10g, recovery of the 12x10g, competitive execution and selective pack innovation.

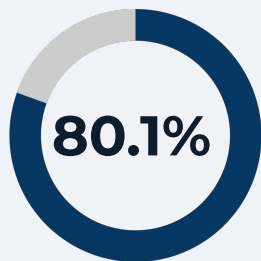

ND = Numeric distribution | WD = Weighted distribution | pp = percentage point

Question	What the 13-week Scan data says	Where to act	How to act	Expected outcome
Which packs & price points can drive value growth?	24x10g Knorrox: +4.1% value growth; +43.6pp ND vs Imana. 12x10g category: +1.4% growth; Knorrox -3.7% vs Imana +9.3%, despite Knorrox having higher ND. 6x10g Knorrox: R10.65 ASP vs R7.86 Imana.	24x10g: Shoprite — Gauteng, Mpumalanga and Limpopo; protect distribution leadership and focus on sales productivity. 12x10g: Imana is growing faster. Shoprite in Western Cape, Eastern Cape and Gauteng, plus SuperSpar in Gauteng and Western Cape. 6x10g: current distribution footprint; focus on affordability rather than distribution expansion.	24x10g: Protect distribution, but improve promotional effectiveness in Gauteng, Mpumalanga and Limpopo. Imana is growing strongly despite lower promotional intensity than Knorrox — investigate offer mechanics, visibility and execution rather than simply increasing discounting. 12x10g: Recover distribution quality first, then selectively match effective promotional activity in Shoprite, Spar and SuperSpar battlegrounds where Imana is growing faster. 6x10g: Develop/test a sustainable sub-R10 proposition to improve affordability and recruit incremental consumers	Grow volume through better execution of existing distribution and a stronger entry-price proposition.
Which variants / innovation offer opportunity?	Beef represents 67% of promotional value; pack architecture has a gap between 12x10g and 24x10g.	Priority retailers and packs.	Prioritise high-value/high-growth variants in the core packs; test 18x10g with a defined price point and measure incremental vs cannibalised volume.	Incremental volume without unnecessarily diluting existing packs.
What are competitors doing?	Imana is growing faster on both 12x10g and 24x10g. Promotion differs by pack: Knorrox is more promotional on 24x10g, while Imana is more promotional on 12x10g.	Higher-value retailers/stores where Imana has 16.5pp advantage and stronger execution.	Improve execution and sales productivity where Imana is outperforming. Use targeted promotion where competitor activity is strongest rather than broad-based discounting.	Close competitive availability gap and improve Knorr growth.
What commercial trends are visible?	Promotional value is concentrated in 24x10g, Shoprite and Beef.	Highest-value packs × retailers × regions.	Concentrate sales-force, listing, promotional and execution resources on the highest-value opportunities rather than applying the same strategy everywhere.	Better return on commercial investment.

Bouillon Category - Key Market Insights

The bouillon category is highly concentrated, with growth driven by a small number of manufactures, retailers and regions

Category Concentration

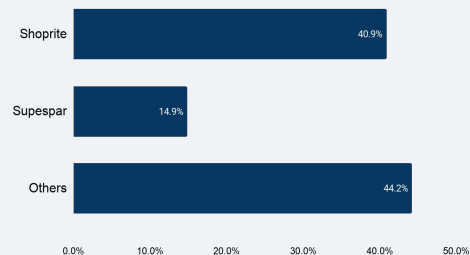

80.1%

Unilever accounts for **80.1%** of total category value.

Retailer Concentration

56.5%

Shoprite and Superspar contribute 56.5% of category value, making them the most influential retail channels for driving growth

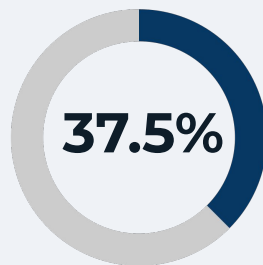

Category Value Concentration by Province

58.9%

Gauteng (27.4%), **Eastern Cape (13.4%)** and **KwaZulu-Natal (18.1%)** together represent more than half of total category value.

Promotional Dependency

37.5%

of category volume is sold on promotion suggesting that promotional activity plays a significant role in driving demand and should be considered when pack sizes and promotional strategies

Bouillon Category - Pack Size Total Market Insights

Value growth is present across the key packs, but volume is declining — making volume recovery the key category opportunity. 24x10g remains the largest value pool and the closest to volume stability, while 6x10g and 12x10g face larger volume declines."

LARGEST VALUE POOL

24X10g

Accounts for 51.8% of the category value

GROWING (+0.7%)

Largest value pool and a key growth platform

STRATEGIC PRIORITY

The 24-pack should remain a priority for future initiatives given its scale and growth contribution.

Bouillon Category - Where is the Category Growing?

Growth is limited and concentrated in a small number of opportunities, while most of the category is in decline
Chicken is the strongest growth flavour; use Chicken as the growth signal while Beef remains the largest promotional/value pool. Prioritise variants based on retailer + pack + flavour performance rather than broad innovation. .

Pack Performance

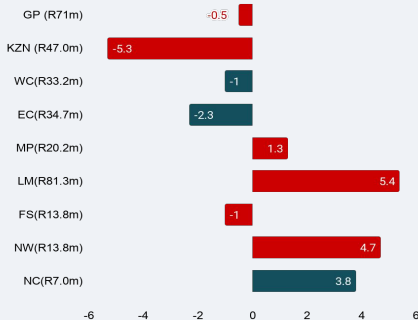

Growth by Pack Size

Value (R'M)

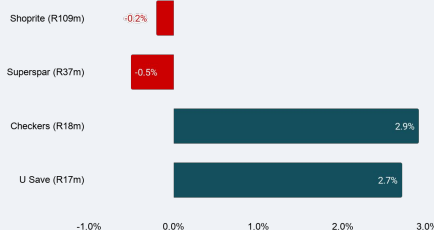

Regional Performance

Growth by Province

Retailer Performance

Growth by Retailer Group

Flavour Performance

Growth by Mainstream Flavour

24x10g is the largest value pool and closest to volume stability, while 6x10g and 12x10g show more significant volume declines.

Growth is concentrated in North West, Northern Cape and Limpopo

Most provinces including Gauteng and KZN are in decline

SuperSpar, U Save and Checkers are growing, Shoprite is declining

Chicken is the strongest performing flavour while Beef remains the largest promotional/value pool

Bouillon Category - Knorrox vs Imana

Knorrox has a strong distribution advantage on 24x10g, but Imana is converting its presence into substantially faster volume growth.

24x10g - Competitive Scorecard					12x10g - Competitive Scorecard				
KPI	Knorrox	Imana	Difference (Knorr- Imana)	Insights	KPI	Knorrox	Imana	Difference (Knorr- Imana)	Insights
Numeric Dist. (%)	99.6%	56.0%	+43.6pp	Knorrox has wider numeric presence	Numeric Distribution (%)	98.2%	71.9%	+26.3pp	Knorrox more widely distributed
Weighted Dist. (%)	58.0%	41.4%	+16.6pp	Knorrox leads in quality distribution	Weighted Distribution (%)	27.6%	44.1%	-16.5pp	Imana has better quality distribution
ASP (R)	R28.64	24.57	R4.07	Knorrox priced at a premium	Average Selling Price (R)	R15.12	R13.65	+R1.47	Knorrox priced at a small premium
% Sales on Promo	49.4%	36.5%	12.9pp	Knorrox is more promotively active	Promotion Frequency (%)	13.3%	34.9%	-21.6pp	Imana more promotively active
Value Growth	+4.1%	+7.6%	-3.5pp	Imana growing faster	Value Growth	+1.4%	+9.3%	-7.9pp	Imana is growing faster
Volume Growth	+2.2%	+20.3%	-18.2pp		Volume Growth	-3.7%	20.2%	-23.9pp	

Protect & Grow 24x10g

Protect Knorrox's strong distribution position and focus on improving sales productivity, promotional effectiveness and competitive growth rather than expanding distribution.

Recover 12x10g

Improve the quality of 12x10g distribution by strengthening presence and execution in higher-value stores where Imana has the WD advantage.

Bouillon Category - Knorrox vs Imana

The 6x10g has strong Knorrox distribution and stable volume, but its R10.65 ASP sits above the desired R0–R10 entry point. The opportunity is to improve affordability and unlock incremental volume rather than expand distribution.

6x10g - Competitive Scorecard				
KPI	Knorrox	Imana	Difference (Knorr- Imana)	Insights
Numeric Dist. (%)	78.4%	53.3%	25.1pp	Knorrox already has broader retail reach than Imana; distribution is not the primary constraint.
Weighted Dist. (%)	93.0%	74.8%	18.2pp	Knorrox has stronger presence in higher-value stores, reinforcing its distribution advantage.
ASP (R)	R10.65	R7.86	R2.79	Knorrox is priced R2.79 above Imana and above the desired R0–R10 entry threshold, creating an affordability gap.
% Sales on Promo	18.0%	12.7%	+5.3pp	Knorrox is 5.3pp more promotional than Imana.
Value Growth	+4.7%	-18.0%	+17.6pp	Knorrox is growing +4.7% despite the price premium, indicating resilience of the pack and an existing demand base.
Volume Growth	-0.4%	-28.4%	+28.0pp	

Recommendation

Evaluate a sustainable sub-R10 6x10g proposition through price/pack architecture testing and consumer validation.

Bouillon Category - Is there an opportunity for an 18-pack?

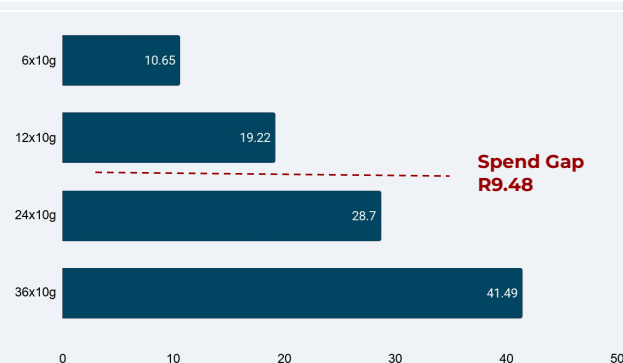

The current pack architecture requires shoppers to make the largest increase in spend when moving from the 12-pack to the 24-pack. An 18-pack could be evaluated to determine whether it addresses this affordability step.

Current Pack Structure

Pack Size	Units per Pack	Value (R'm)	Value Contri %	Value Growth %
24x10g	24	134.1	51.8%	+0.7%
12x10g	12	85.0	32.8%	+1.4%
6x10g	6	17.4	6.7%	0.6%
36X10g	36	10.5	4.1%	-8.4%

The current architecture is concentrated in 12x10g, 24x10g and 36x10g, with a R9.48 spend gap between the 12x10g and 24x10g packs.

Average Selling Price by Pack Size

The 13-week data identifies a R9.48 spend gap between the 12x10g and 24x10g packs. An 18x10g could provide an intermediate affordability step and should be commercially tested for incremental volume.

Commercial Opportunity

Opportunity	Scan Evidence
Proposed Pack	18x10g
Current Status	Not available in the category
Strategic Role	Bridge the pack size gap between the 12x10g and 24x10g packs
Commercial Rationale	Provides an intermediate pack option within the current pack sizes
Recommendation	Progress the 18-pack to commercial evaluation and market testing

Bouillon Category - How Unilever Can Increase Knorrox Volume

The biggest POS-identified volume opportunity is the 24x10g and 12x10g portfolio, representing ~56,700 of addressable volume. The priority is to execute against these opportunities while testing longer-term pack architecture changes.

Protect & Strengthen the 24x10g pack

Why?

- 51.8% of category value
- Largest value pack and growing (+0.7%)
- Strong Weighted Distribution vs Imana
- Knorrox volume +2.2% vs Imana +20.3%

Action:

Prioritise Shoprite in Gauteng, Mpumalanga and Limpopo: audit Knorrox store availability, visibility and promotional mechanics against Imana and close execution gaps before increasing promotional spend.

Improve 12x10g Distribution Quality

Why?

- 32.8% category value
- +1.4% growth
- Knorrox leads by +26.3pp ND but trails Imana by 16.5pp WD

Action

Prioritise higher-value retailers/stores where Imana has a WD advantage. Improve execution and sales productivity in existing distribution rather than simply adding more stores.

Test 18x10g

Why?

- Structural gap between 12x10g and 24x10g
- No current 18x10g proposition
- Potential intermediate affordability step

Action

Conduct a targeted commercial pilot with a defined price point and measure incremental volume vs cannibalisation of 12x10g and 24x10g before considering broader rollout.

Fix the 6x10g Entry Proposition

Why?

- Knorrox has strong distribution: **78.4% ND / 53.3% WD**
- Knorrox ASP: **R10.65**
- Imana ASP: **R7.86**
- Knorrox vol. growth: **-0.4%**
- Knorrox value growth: **+4.7%**
- Imana value growth: **-18.0%**
- Imana volume growth: **-28.4%**

Action

Evaluate a sustainable sub-R10 proposition rather than simply adding more distribution. Test whether a lower entry price can recruit incremental volume without damaging the 12x10g/24x10g portfolio.

Thank You!

Joseph Hlongwane
